SMTP Username

1 The title that shows in most emails and forms for the clients.

2 The sign up URL, where people can sign up for the service.

3 The main email address, date and time format.

4 How to send emails, you can use the built in PHP MAIL feature but you have to use a email address with the same domain registered on the server.

Username Filter

administrator,admin,operator,test,tester,demo,demos,asdf,ab

Wildcard Filter

admin,support,cd3,administrator,operator,user,client

Submit **Test Email Settings**

5 The username filter or black list. Add as many username you do not allow for your clients to use.

6 Wildcard filter will not allow the sub domains or url's when a client is signing up or when a clients is created in the administration area.

7 The green button is to save all the settings.

8 The blue button will test the email settings. Make sure, the system can send emails or your clients cannot receive confirmation emails. Check with your hosting provider for your email settings. We don't know them.
