# Live Chat Template

How to Start?

The live support chat will be started with the click on the live chat button. That can be fully customised with colours and icons from font awesome or with your own online and offline image.

After starting the live support chat it tries to connect to the operator. It will now create a new unique code for each chat to come back and proceed with the live chat even a couple of days later…

After opening the chat you will need at least to enter a question but depend on the settings it can be name, email, phone and an avatar as well. With the send button you submit your information and start the live support chat.

As soon an operator has picked up the chat you will be informed by sound and text. You are now in a live conversation.

Buttons:

Green = Your Profile

Red = Close Session

Blue = Minify Chat
